PROFESSIONAL SUMMARY

Software Engineer with 2+ years at Kumaran Systems (including 6-month internship) across Angular enterprise applications and .NET/C# tooling. Currently building the Freightcom admin portal in Angular — role-based access control (RBAC), data-driven UIs, REST API integration. Delivered test automation, Serilog logging, and developer tooling on a .NET migration platform. CCNA certified; pursuing MongoDB Architect.

WORK EXPERIENCE

Trainee Programmer | Kumaran Systems, Chennai *Oct 2024 – Present*

Project: Freightcom Admin Portal (Angular) — Current

- Develop and maintain Freightcom, an enterprise admin portal in the freight-logistics domain, using Angular, TypeScript, and RxJS — delivering data-driven UIs for operations teams.
- Designed and implemented role-based access control (RBAC) — route guards, permission-driven UI rendering, and feature specifications — improving access governance across user roles.
- Built reusable components and lazy-loaded feature modules; integrated RESTful APIs with robust error handling and reactive state patterns, collaborating with backend teams on API contracts.
- Delivered end-to-end front-end features for PMO — an internal Kumaran Systems project — using Angular and PrimeNG (Figma to implementation to demo).

Project: State National — Legacy Migration Platform (.NET / C#)

- Built automation for D3/D4 test-case execution (environment restore, precondition runs, and legacy/migrated program execution) with scheduled runs — shortening test cycle time and reducing manual setup errors.
- Implemented a generic Serilog-based logging helper for batch jobs and UI flows (exceptions, stack traces, timing metrics), making production troubleshooting and root-cause analysis faster.
- Authored and enforced code-review and unit/integration test checklists applied to every pull request (PR), improving release quality.
- Developed a Git change-count utility for audits and code analysis; delivered end-to-end front-end features for D2/D3/D4 UI (Figma to implementation to demo).
- Provided on-call incident support with rapid hot-fixes; conducted hands-on KT sessions (Angular patterns, Figma, Lovable AI, ISQL migration) for Chennai and Cuddalore teams with docs and demos.

Intern | Kumaran Systems, Chennai *Mar 2024 – Sep 2024*

- 6-month internship focused on ASP.NET and C# development; automated routine tasks with Linux shell scripting.
- Developed the In-Out Calculator application using .NET and C# for time tracking and reporting.

Frontend Developer (Freelance, during B.E.) | HackOverSecurity *Oct 2022 – Mar 2023*

- Delivered 4+ live client websites (HTML5, CSS3, JavaScript, Bootstrap), including PotOut Solutions and VCS Consultancy, alongside college studies.

TECHNICAL SKILLS

- **Frontend:** Angular (12+), Angular Material, PrimeNG, TypeScript, RxJS, JavaScript (ES6+), HTML5, CSS3, Bootstrap, React (basics), Responsive Design
- **Backend & APIs:** C# / .NET (console applications, tools development), ASP.NET, RESTful API design & integration, Go (learning)
- **Databases:** MySQL, PostgreSQL, MongoDB (pursuing Architect certification)
- **Tools & Platforms:** Git/GitHub, Jira, Serilog, Linux, Shell Scripting, Docker (fundamentals), Figma, VS Code
- **Networking & Security:** CCNA-certified — TCP/IP, subnetting, VLANs, routing & switching; secure coding awareness (RBAC, CORS, auth flows)

COLLEGE PROJECTS

- **Razorpay Payment Integration —** web app implementing order creation, checkout flow, and payment verification via Razorpay API. github.com/prabanjan127/payment_example
- **Bus Ticket Booking System —** Java + MySQL (JDBC) app with full CRUD across 5+ tables. github.com/prabanjan127/bus_ticket_booking_system

CERTIFICATIONS

- Cisco CCNA — Routing & Switching (Cisco Networking Academy)
- Cisco NDG Linux Unhatched
- MongoDB Architect — in progress (MongoDB University)

EDUCATION

B.E. Computer Science & Engineering | Rathinam Technical Campus (Anna University) | CGPA: 7.63 *Tamil, English*
